Winter 2017
Safety Showcase

CMDI is going On the Road in 2017 to show our customers Industrial Safety Solutions

Skarda Equipment and Controlled Motion Dynamics have created a safety gurney which they are taking on the road to customers. The demo framework is a wheeled gurney that folds down for loading into the back of our van and features many new industrial safety products from our vendors such as 80/20 and Pinnacle Systems.

On the gurney, a fully operating pneumatic press demonstrates the various safety products which can run the press more safely and potentially more efficiently for the manufacturer. Making a machine more safe for the operator can be as low tech as installing physical

barriers such as hard guarding like safety gates, to the more complex such as perimeter light curtains or safety mats.

CMDI and Skarda Equipment can bring the Safety Gurney to your plant to present our many options on *Industrial Safety*.

Please contact your Skarda outside sales rep or call us at

(800) 228-9750 to schedule a free demonstration at your plant.

Van for transporting the Safety Gurney to your plant

The type of safety devices that are appropriate for each customer vary by application. If you are interested in seeing our Safety Gurney demonstration, or would like more information on Industrial Safety Devices in your plant, please contact us at (800) 228-9750 and we can do a full on-site demonstration at no charge.
